OM protein - protein search, using sw model

September 15, 2004, 10:30:21; Search time 8.94737 Seconds (without alignments) 58.196 Million cell updates/sec Run on:

US-09-673-795-2 51 1 SLFEGIDIYT 10 Title: Perfect score: Sequence:

BLOSUM62 Gapop 10.0 , Gapext 0.5 Scoring table:

141681 segs, 52070155 residues Searched:

141681 Total number of hits satisfying chosen parameters:

Minimum DB seg length: 0 Maximum DB seg length: 2000000000

Post-processing: Minimum Match 0% Maximum Match 100% Listing first 45 summaries

SwissProt\_42:\* Database :

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Biol. Chem. 261:12692-12699 (1986).
                                                                                                                                                                                                                                                                                                                                                  human heat shock profein.";

Clin. Bxp. Allergy 27:682-690(1997).

-1. ALLENGEN: Gauses an allergic reaction in human.

-1. SIMILARITY: Belongs to the heat shock protein 70 family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Score 47; DB 1; Length 503; Pred. Sainis I., Angelidis C., Pagoulatos G., Lazaridis I.;
Inducible member of the hsp70 gene Which is salightly induced by heat is the main virus inducible member of the hsp70 gene family.";
FEBS Lett. 355:282-286(1994).
C. PERSISTION: IN COOPERATION WITH OTHER CHAPERONES, HSP70S STABILIZE PREXISTENT PROTEINS AGAINST AGGREGATION AND MEDIATE THE FOLDING OF NEWLY TRANSLATED POLYPEPTIDES IN THE CYTOSOL AS WELL AS WITHIN ORGANELLES. THE HSP70S IN MITOCHONDRIA AND THE ENDOPLASMIC RETICULUM PLAX AN ADDITIONAL ROLE BY PROVIDING A DRIVING FORCE FOR PROTEIN TRANSLOCATION. THEY ARE INVOLVED IN SIGNAL TRANSDUCTION PATHWAYS IN COOPERATION WITH HSP90. THEY PRATICIPATE IN ALL THESE DROCESSES THROUGH THEIR ABILITY TO RECCONIZE NONATIVE CONFORMATIONS OF OTHER PROTEINS THEY BIND EXTENDED PEPTIDES SEGMENTS WITH A NET HYDROPHORIC CHARACTER EXPOSED BY POLYPEPTIDES COMPONENT BY THE A NET HYDROPHORIC CHARACTER EXPOSED BY POLYPEPTIDES COMPONENT BY THE A NET HYDROPHORIC CHARACTER EXPOSED BY POLYPEPTIDES DURING TRANSLATION AND MEMBRANE TRANSLOCATION, OR FOLLOWING

"Aginactin, an agonist-regulated F-actin capping activity is associated with an Hac70 in Dictyostelium.";

J. Biol. Chem. 268.23267-23274(1993).

-I. FUNCTION: AFFECTS ACTIN POLYMERIZATION THROUGH INTERACTION WITH THE ACTIN FINDING PROTEIN CAP32/34, ACTS AS A CHAPERONE BY STIMULATING THE REPOLDING OF DENATURATED CAP32.

-I. SUBCELLULAR LOCATION: Cytoplasmic. Found in F-actin-rich regions of the call cortex and call protrusions.

-I. DEVELOPMENTAL STAGE: Heat shock cognate proteins are expressed constitutively during normal development.

-I. SIMILARITY: Belongs to the heat shock protein 70 family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 MSSIGIDLGTTYSCVGVWQNDRVEIIAND -> IHHHINGNATWVVESGPVSEVLSFN (IN REF. 2).

Genet. 25:196-196 (1994).

-1- FUNCTION: IN COOPERATION WITH OTHER CHAPERONES, HSP70S STABILIZE PREXISTENT PROTEINS AGAINST AGRAGATION AND MEDIATE THE FOLIDING OF UNBLY TRANSLATES AGAINST AGRAGATION AND MEDIATE THE FOLIDING OF UNBLY TRANSLATED POLYEPPTIDES IN THE CYTOSOL AS WELL AS WITHIN ORGANELLES. THE HSP70S IN MITOCHONDRIA AND THE EMDOPLASMIC RETICULM PLAY AN ADDITIONAL ROLE BY PROVIDING A DRIVING FORCE FOR PROTEIN TRANSLOCATION WITH HSP90. THEY PARTICIPATE IN ALL THESE PROCESSES THROUGH THEIR ABILITY TO RECOGNIZE NONMATIVE CONFORMATIONS OF OTHER PROTEINS. THEY BIND EXTENDED PEPTIDE SEGMENTS WITH A NET HYDROPHOBIC CHARRACTER EXPOSED BY POLYPEPTIDES DURING TRANSLATION AND MEMBERANE TRANSLOCATION, OR FOLLOWING

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       "Complete nucleotide sequence of a porcine HSP70 gene.";
Immunogenetics 35:286-289(1992).

-!-FUNCTION: In cooperation with other chaperones, Hsp70s stabilize preexistent proteins against aggregation and mediate the folding of newly translated polypeptides in the cytosol as well as within organelles. These chaperones participate in all these processes through their ability to recognize nonative conformations of other proteins. They bind extended peptide segments with a net hydrophobic character exposed by polypeptides during translation and membrane translocation, or following stress-induced damage.
-!- SIMILARITY: Belongs to the heat shock protein 70 family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps

Volpe T., Warner J.R., McLaughlin C.S.,
Submitted (SEP-1994) to Swiss-Prot.
-!-FUNCTION: SSA1 MAY PLAY A ROLE IN THE TRANSPORT OF POLYPEPTIDES
BOTH ACROSS THE MITOCHONDRIAL MEMBRANES AND INTO THE
ENDOPLASMATIC RETICULUM. A FUNCTIONAL DIFFERENCE BETWEEN YEAST
SSA1 AND SSA2 PROTEINS IS EXPECTED. SSA1 CAN PARTICIPATE IN THE
ATP-DEPRINDENT DISASSEMBLY OF CLATHRIN-COATED VESICLES.
-!- SUBCELLULAR LOCATION: Cytoplasmic.
-!- SIMILARITY: Belongs to the heat shock protein 70 family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Bos taurus (Bovine).

THEY CALLE TITLUS TITLUS TO A COPERATION WITH OTHER CHAPERONES, HSP70S STABILIZE PREXISTENT PROTEINS AGAINST AGGREGATION AND MEDIATE THE FOLDING OF NEWLY TRANSLATED POLYPEPTIDES IN THE CYTOSOL AS WELL AS WITHIN ORGANILLES. THE HSP70S IN MITOCHONDRIA AND THE ENDOPLASMIC RETICULUM PLAY AN ADDITIONAL ROLE BY PROVIDING A DRIVING FORCE FOR PROTEIN TRANSLOCATION. THEY ARE INVOLVED IN SIGNAL TRANSDUCTION PATHWAYS IN COOPERATION WITH HSP90. THEY PARTICIPATE IN ALL THESE PROFESSES THROUGH THEIR ABILITY TO RECOGNIZE NONNATIVE CONFORMATIONS OF OTHER PROTEINS. THEY BIND EXTENDED PEPTIDE SEGMENTS WITH A NET HYDROPHOBIC CHARACTER EXPOSED BY POLYPEPTIDES DURING TRANSLATION AND MEMBRANE TRANSLOCATION, OR FOLLOWING STRESS-INDUCED DAMAGE.

-!- INDUCTION: By heat shock.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 This SWISS-PROT entry is copyright. "Cloning of CDNA for the rat inducible 70KD heat shock protein
(HSP40).";

Submitted (KOV-1993) to the EMBL/GenBank/DDBJ databases.

-1- SIMILARITY: BELONGS TO THE HEAT SHOCK PROTEIN 70 FAMILY.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

dnax-type molecular chaperone HSC70 - California sea hare (fragment)

Nylternate names: heat shock protein 70 homolog HSC70

Species: Aplyasia californica (California sea hare)

C;Becies: Aplyasia californica (California sea hare)

C;Becies: Aplyasia californica (California sea hare)

C;Accession: B44261

S;Kuhl, D: Kemmedy, TE:, Barzillai, A.; Kandel, B.R.

J. Call Biol. 119, 1069-1076, 1992

A;Title: Long-term sensitization training in Aplysia leads to an increase in the express harden number: A44261; MUID:93077669; PMID:1360013
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        A, Accession: B44261

### RESULT 2

diak-type molecular chaperone (clone pTHS70.7) - rainbow trout (fragment)
Nylternate names: 70K heat shock protein
C;Species: Oncorhynchus mykiss (rainbow trout)
C;Date: 21-Feb-1997 #sequence\_revision 21-Feb-1997 #text\_change 20-Aug-1999
C;Accession: 151344 #sequence\_revision 21-Feb-1997 #text\_change 20-Aug-1999
R;Kothary, R.K.; Jones, D.; Candido, B.P.M.
Mol. Cell. Biol. 4, 1785-1791, 1984
A;Title: 70-kilodalton heat shock polypeptides from rainbow trout: Characterization of CA;Reference number: 151344; MUID:85036330; PMID:6092938
A;Accession: 151344
A;Status: preliminary; translated from GB/EMBL/DDBJ
A;Residues: 1-278 «KOT»
A;Residues: 1-278 «KOT»
A;Cross-references: GB:KO2549; NID:g213803; PIDN:AAA49562.1; PID:g213804
C;Function: involved in protein folding and assembling/disassembling of protein compl C;Superfamily: heat shock protein 70
C;Keywords: ATP; molecular chaperone

                                                                                                                                    Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence 3, Application US/08797358B
Sequence 3, Application US/08797358B
Patent No. 6268478
GENERAL INFORMATION:
APPLICANT: Adams, John
TITLE OF INVENTION: INTRACELLULAR VITAMIN D BINDING PROTEIN
NUMBER OF SEQUENCES: 9
CORRESPONDENCE ADDRESS:
ADDRESSEE: Campbell & Flores LLP
STREET: 4370 La Johla Village Drive, Suite 700
CITY: San Diego
STRTE: California
COUNTRY: United States
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          .;

MEDIUM TYPE: Floppy disk
COMPUTER: IBM PC Compatible
COMPUTER: IBM PC Compatible
COMPUTER: IBM PC Compatible
COMPUTER: IBM PC Compatible
OPERATING SYSTEM: PC-DOS/MS-DOS
SOFTWARE: PatentIn Release #1.0, Version #1.25
CURRENT APPLICATION DATE:
APPLICATION NUMBER: US/08/797,358B
FILING DATE: 11-Feb-1997
CLASSIFICATION NUMBER: US 60/011,491
FILING DATE: 12-FEB-1996
ATTORNEY/AGENT INFORMATION:
REFERENCE/DOCKET NUMBER: 31,815
REFERENCE/DOCKET NUMBER: 31,8

Identifying mutant peptides from heat-shock protein 70, for treatment of cancer.

Claim 10; Page 6; 56pp; French.

This peptide corresponds to amino acid residues 286-295 of the human heat shock protein 70 (hsp70). The invention relates to a method of identifying peptides, derived from hsp70 that stimulate a tumour-specific T cell response. Identification of the hsp70 peptides that have at least one mutation or alteration compared with the native sequence, and induce encoding DNA from one or more tumour-specific T cell response, comprises: (i) amplifying hsp70 sequences into a vector that can be replicated in bacteria; (iii) sequencing fragments in each cultured bacterial colony to identify any hsp70 mutations, and (iv) determining the immunogenicity of the mutant peptides identified. The peptides, optionally formulated with an agent that induces cellular stress, are used for treatment of cancer,

Sequence 10 AA;

```
the amino acid sequence of fragment 2 relating to position 286-295 of human heat shock protein 70 (HSP70) is given. The new invention relates to lymphocytes which recognise cells of a patient in which overexpression of HSP leads to a substantial increase in the numbers of HSPs and HSP leads to a substantial increase in the numbers of HSPs and HSP epitopes presented on the pericellular membrane. Recognition of increased numbers of HSP epitopes or cell pericellular membranes by lymphocytes elicits a cytotoxic response which kills the target cells. As a further embodiment of the invention, HSP70 epitopes are mutated prior to being loaded into antigen the pericellular infections by vaccination. The tolerance of the organism to the tumour or to the virus associated HSP is broken using an immunogenic mutated form of HSP and induction of a stress on the target tumoural or intracellular infected cells.
                                                                                                                                                                                                                                                                       0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Lymphocytes useful for treating cancer, recognizes specifically transformed human cells with induced and increased membrane expression of
particularly solid cancers (carcinoma, sarcoma, melanoma, neuroblastoma, cancers of head and neck, particularly kidney cancer). The peptides may also be used to increase the proportion of tumour-specific cytocoxic T lymphocytes in a cell culture and/or induce these cells to secrete cytocoxic factors (specifically interleukin-2, interferon-gamma and timmour necrosis factor), particularly where the cells are used to stimulate immunodenicity and high specificity for particular Hund.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              HSP; HSP70; heat shock protein 70; cancer; chronic infectious disease; vaccine; HSP-peptide complex; tumour; peptidic fragment; lymphocyte; cytotoxic response; epitope; antigen presenting cell; fragment 2.

the amino acid sequence of fragment 3 relating to position 286-295 of human heat shock protein 70 (HSP70) is given. The new invention relates to lymphocytes which recognise cells of a patient in which overexpression of HSP has been induced. Overexpression of HSP leads to a substantial increase in the numbers of HSPs and HSP epitopes presented on the pericellular membranes Recognition of increased numbers of HSP epitopes or cell pericellular membranes by lymphocytes elicits a cytotoxic response which kills the target cells. As a further embodiment of the invention, HSP70 epitopes are mutated prior to being loaded into antigen presenting cells. This has the effect of increasing the immune response to HSP and helps direct the immune response to specific cells, (e.g. cancer cells). HSP70 fragments are useful for treating cancer or intracellular infections by vaccination. The tolerance of the organism to the tumour or to the virus associated HSP is broken using an immunogenic mutated form of HSP and induction of a stress on the target tumoural or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        0

Sequences ABR82793-835 represent 43 overlapping peptide fragments of human heat-shock protein 70 (hsp70). The hsp70 peptides provide reliable differentiation between diabetes types I and II. The peptides induce a shift of the T cell response from Th1 (proinflammatory) to Th2 autoimmune diseases, especially type I diabetes but also systemic lupus autoimmune diseases, especially type I diabetes but also systemic lupus erythematosus, multiple sclerosis and rheumaroid arthritis; and (b) for diagnosing presence or onset of these diseases. Isolated T cells may be activated in vitro with (A), or with heat-shock protein 70 and the responding cells are selected, attenuated and then returned to the

                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention relates to oligonucleotide clones originating in barley (Hordeum vulgare) which contain single nucleotide polymorphisms (SNP). The oligonucleotides may be used for analysis of SNPs among barley varieties, identification of particular varieties and genotype-phenotype analysis, isolation of specific genes and creation of new varieties by transformation of barley varieties with them and production of new barley varieties with desired properties. The present sequence represents an oligonucleotide clone sequence featured in the specification. The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at fip, wipo.int/pub/published-pct-sequences
Barley; single nucleotide polymorphism; SNP; genotype-phenotype analysis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps
                                                                                                                                                                                                                                                                                                                          Single nucleotide polymorphism sites in barley varieties and DNA sequences containing them for analysis and identification of barley varieties and production of barley transformants with desired
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Human; heat shock protein; HSP70; chromosome 6p21.3-22; stress; chromosome 14q22-24; transcription; rheumatism; schizophrenia; depression; nephrotic syndrome; SHSP70.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            .,

Abnormal transcription of intracellular HSP70mRNA under acute and chronic continuous load of stress in a human being and its application.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         sequence. Human heat shock proteins are located on chromosomes 6p21.3-22 and 14g22-24. The invention relates to the abnormal transcription of intracellular HSP70mRNN under acute and chronic stress load in a human. The abnormal transcription of HSP70 can be used in the improvement of stress and response and diagnosis of stress diseases including rheumatisms, schizophrenia, depression and nephrotic syndrome
                                                                                                                                 Abnormal transcription of intracellular HSP70mRNA under acute and chronic continuous load of stress in a human being and its application.
                                                                                                                                                                                                                  This sequence represents the human heat shock protein SHSP70 amino acid sequence. Human heat shock proteins are located on chromosomes 6p21.3-22 and 14q22-24. The invention relates to the abnormal transcription of intracellular HSP70mRNA under acute and chronic stress load in a human. The abnormal transcription of HSP70 can be used in the improvement of stress and response and diagnosis of stress diseases including rheumatisms, schizophrenia, depression and nephrotic syndrome
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          This sequence represents the human heat shock protein SHSP70 amino acid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Human; heat shock protein; HSP70; chromosome 6p21.3-22; stress; chromosome 14q22-24; transcription; rheumatism; schizophrenia; depression; nephrotic syndrome; SHSP70.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              This sequence represents the human heat shock protein SHSP70 amino acid sequence. Human heat shock proteins are located on chromosomes 6p21.3-22 and 14q22-24. The invention relates to the abnormal transcription of intracellular HSP70mRNA under acute and chronic stress load in a human. The abnormal transcription of HSP70 can be used in the improvement of stress and response and diagnosis of stress diseases including rheumatisms, schizophrenia, depression and nephrotic syndrome
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps
